DDOE and DPR are hosting free educational, hands-on workshops to help property owners create unique and important habitat for wildlife on their own land.

The workshops will include presentations on conservation landscaping and gardening for wildlife, plant selection, general landscape design principles and how to do a site assessment. Participants will help plant a demonstration garden at the workshop site, and will receive a habitat kit at the conclusion of the workshop. The kit will contain a native plant guide, an invasive plant booklet, a book on wildlife gardening, a birdhouse kit and live plants.

Preregistration is required.

For more information about the workshops or to sign up please visit:
